Accurate information on currently registered herbicides for use in seedling alfalfa and in established alfalfa grown for seed production is important for every alfalfa seed producer. The attached tables provide information on registered herbicides for seedling alfalfa in 2011 (Table 1) and registered herbicides in established alfalfa for seed production in 2011 (Table 2). Further details on the use of these registered herbicides may be found in the 2011 Saskatchewan Guide to Crop Protection and on the crop protection product labels.

* = use only when under-seeded
 ** = use only when under-seeded; do not apply to Flemish varieties (purple flowered) of alfalfa
 *** = spring application of liquid formulations only

Companion crop options: B = barley, CA = canola, CL CA = CLEARFIELD canola, F = flax, O = oats, P = peas, W = wheat

Control ratings: C = control, C¹ = control of Group 1 susceptible wild oats or green foxtail only,
 C² = control of Group 2 susceptible cleavers, wild mustard, wild oats, canola or wheat only, C³ = control of Group 3 susceptible green foxtail only,
 C⁴ = control of Group 8 susceptible wild oats only, S = suppression, S¹ = suppression of Group 2 susceptible kochia or Russian thistle only,
 • = control at rates higher than registered in seedling alfalfa
